IN THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1-22 Canceled.

- 23 (Original). A communication arrangement for communicating a data signal using a cable television transmission medium, the communication arrangement comprising:
- a 1:N rate encoder, coupled to an input data stream and configured to reproduce a symbol or FEC block represented by a segment of the input data stream N times;
- a transmission arrangement configured to use a plurality of outputs to transmit each reproduced symbol or FEC block using a distinct transmission channel; and
- a receiver, coupled to the outputs of the transmission arrangement and configured to perform soft-combining of signals received from the outputs of the transmission arrangement and to output an estimate of the symbol or FEC block.
- 24 (Original). A communication arrangement, according to claim 23, wherein the soft-combining comprises at least one of mean squared error estimation, identification of burst noise within a data packet, weighted combining, and selective combining.
- 25 (Original). A communication arrangement, according to claim 23, wherein one of the transmission channels is used to transmit an original message and the remaining transmission channels are used to perform retransmission.
- 26 (Original). A communication arrangement, according to claim 23, wherein a plurality of information bits are used to represent a symbol to be transmitted, and wherein the transmission channels are used to transmit the information bits using a delay-encoded mapping scheme.

27 (Original). A communication method for communicating a data signal using a cable television transmission medium, the communication method comprising:

reproducing a symbol or FEC block represented by a segment of an input data stream a preselected number of times;

using a plurality of transmission channels to transmit each reproduced symbol or FEC block using a distinct transmission channel; and

performing soft-combining of signals received from the transmission channels.

- 28 (Original). A communication method, according to claim 27, wherein the soft-combining comprises at least one of mean squared error estimation, identification of burst noise within a data packet, weighted combining, and selective combining.
- 29 (Original). A communication method, according to claim 27, further comprising: transmitting an original message using one of the transmission channels; and performing retransmission using the remaining transmission channels.
- 30 (Original). A communication method, according to claim 27, further comprising: using a plurality of information bits to represent a symbol to be transmitted; and using the transmission channels to transmit the information bits using a delay-encoded mapping scheme.
